

Anti-Bump and Anti-Snap

Available on ALL SQUIRE **Stronghold**[®] security cylinders
(comes as standard on the S1 Open Profile Range)

Why Snapsafe[™] Anti-snap?

The problem

Break-ins involving doors fitted with euro-cylinders are on the increase. When subjected to a specific physical attack the cylinder will SNAP at the fixing point causing the cylinder to fall completely out of the door. SECURITY BREACHED

The solution

Fit a SQUIRE **Stronghold**[®] security cylinder featuring **SnapSafe**[™]. This is a specially designed feature which engineers a pre-determined snap point which is in front of the fixing point. When the cylinder is attacked it will snap leaving most of the cylinder still in the door and still working. SECURITY MAINTAINED

Why Bumpsecure[™] Anti-bump?

The problem

Break-ins involving the technique of 'bumping' open a cylinder is on the increase. This method of entry is especially worrying as it leaves no evidence of forcible entry making insurance claims particularly hazardous. The internet has made information and access to bump keys easily obtainable. The technique uses a 'bump key' to manipulate the pins to create the 'shear-line' thus allowing the cylinder to be opened. SECURITY BREACHED

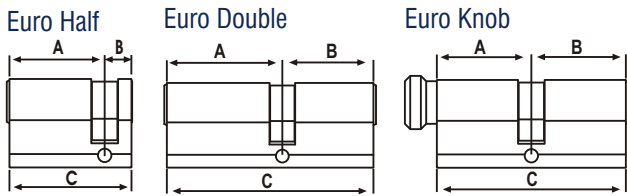

The solution

Fit a SQUIRE **Stronghold**[®] security cylinder featuring **Bumpsecure**[™]. This is a specially designed feature that prevents the creation of the 'shear-line' so the cylinder remains locked. SECURITY MAINTAINED.

SnapSafe[™] Anti-Snap and **Bumpsecure**[™] Anti-bump functions come as standard on the SQUIRE S1 Open Profile cylinder range.

They are also available as optional extras on the SQUIRE **Stronghold**[®] RESTRICTED Range and SQUIRE **Stronghold**[®] P1 PROTECTED Range. They can also be incorporated in the MAGNATEX PATENTED Range. And for those who prefer DIMPLE keys the E1 Open Profile and E1C RESTRICTED profile cylinders can also be adapted to feature **SnapSafe**[™] AND **Bumpsecure**[™].

S1 Open Profile Cylinder features

- High quality 6-pin locking system with nickel plated pins
- 262,000 keying differs
- Picking protected
- Drill protection in cylinder body with 1 alloy steel pin
- Drill protection in core with 3 alloy steel pins
- Protection against pulling
- Nickel plated core (Nickel finish cylinders only)
- High wear resistance
- Supplied with 3 nickel plated brass SQUIRE keys
- Can be supplied masterkeyed or keyed alike
- Blanks available from SQUIRE.

R1 Restricted Profile Cylinder features

- 6-pin locking system with nickel silver pins
- 530,000 keying differs
- Restricted multiple profiles (profiles will be available under close supervision) security key card protected
- Picking protected
- Drill protection in cylinder body with 1 tungsten carbide pin
- Drill protection in core with 3 tungsten carbide pins
- Protection against pulling
- Nickel plated core (Nickel finish cylinders only)
- High wear resistance
- Supplied with 3 nickel silver keys
- Can be supplied masterkeyed or keyed alike
- Security card protection system.

P1 Protected Profile Cylinder features

- Features as above, key blanks not available
- Cut keys only available from SQUIRE.

E1/E1C Dimple Profile Cylinder features

- 470,000 keying differs
- Uses flat keys with dimple cuts
- Other features same as R1 Profile.

Protected profiles using the Magnetex system also available.

Packaging

Cylinders are available boxed or in branded plastic wallets.

Master keyed and keyed alike are available from Squire or Squire Stronghold Cylinder Centre.
