

## Features and benefits of Cylinder locks

This exciting new range of cylinders combines uniqueness, quality, reliability and a competitive pricing structure. All cylinders come with 6-pin technology, anti-drill capabilities and anti-picking protection as standard features.

Available in two finishes - brass and nickel silver - our **Standard** range offers not only quality and reliability, but also a very distinctive, unique key bow.

The **Restricted** range has a secure method that controls the copying of keys. This is achieved by way of a security key card and close monitoring of issued key blanks.

To enhance the security of key blanks we have our **Protected** range. This provides the specification market with the ideal answer to "who actually has a key blank that can copy my key." "We never issue protected key blanks and the profile is protected from copying throughout life long use.

This product range has been successfully type-tested for conformity to all of the requirements of DIN 18254 - EN1303.

All products have been manufactured to ISO 9001: 2000 international quality standards.

## Anti-Bump Magnapin™ System

Available on all Squire  
cylinders

With the recent media attention on the ease of releasing a cylinder lock with minimal effort using the bump method; our design team has once again come up with an innovative design feature to stop the bumping of cylinders. The feature utilises existing drivers and differ pins which means it is fully compatible to all our **Stronghold**® cylinder systems. All Magnapin cylinders will have full masterkey and keyed alike capabilities.
