

## Elite1™ - Dimple Pin System

The SQUIRE **Stronghold® Elite1™** dimple system offers premium quality, reliability and a different dimension of cylinder security. Not only this but the **Elite1™** dimple pin answers a question often asked by security professionals. How can you combine a conventional saw tooth key system with a dimple system and use the same body for both?

With the new **Elite1™** system you can. Using the same body as our Standard and Restricted range of cylinders you can convert these systems to the **Elite1™** very easily. The **Elite1™** system has the same space measurements and uses the same top pins / drivers and springs. So all you need to do is remove the Standard / Restricted core and replace it with the **Elite1™** core.

You will need a small addition to your pinning kit to include the **Elite1™** differ pins but all you have to stock is **Elite1™** key blanks, **Elite1™** cores and **Elite1™** differ pins.

- High quality 6 pin locking system with nickel plated pins
- 470,000 keying differs
- Picking protected
- Drill protection in cylinder body with 1 pin
- Drill protection in core with 3 pins
