

## L4 Lock off - locking off electrical switch gear

The SQUIRE L4 Lock-Off is designed to stop accidental start up of machinery:

- Protecting personnel from injury
- Preventing damage to equipment
- Avoiding costly spills or wastage.

Where more than one person is working on plant, it can be secured in the off position until each worker has removed his lock. Up to 6 locks can be fitted and the equipment cannot be restarted until all locks have been removed.

Coloured padlocks are ideal to use with the L4 Lock-Off. Individual workers or departments can be assigned their own ID colour.
