

## Masterkeying - key control

Whether it is for padlocks or cylinders, we can offer a masterkeying service on most SQUIRE padlocks. The benefits of a masterkeying system is that key control is retained only by one supervisor or manager whilst maintaining the security elsewhere. We can design your own customised masterkey system using our latest software and trained personnel. Masterkey services can be supplied as part of the Special Products Service.

Masterkeying offers complete flexibility in access control.

## Keyed alike

Keyed alike padlocks and security cylinders are the convenient and low cost method for managing security in any situation. Keyed alike is a service that is available on almost all SQUIRE products and can be supplied as part of the Special Products Service.

## Long shackles

Long shackle padlocks offer greater flexibility in security where the application requires it. We offer a very wide selection of long shackle padlocks from low security right up to hi-security CEN grade. All long shackle padlocks are available as part of the Special Products Service.
