

# inigma - the range in detail

## Padlocks, cylinders and locksets

Inigma is available across a range of Squire products including euro cylinders and the formidable high security **Stronghold**® range of padlocks, the HLS50 high security lockset and Marine range (with a stainless steel shackle option).

The integration with **Stronghold**® offers the added reassurance of knowing that the padlocks themselves have been tested in house to prove that they can withstand the harshest of attack, plus most of the **Stronghold**® range has the added benefit of being CEN tested and approved.

**Stronghold**® padlocks come in a wide range of body widths and shackle types (including boron and stainless steel) and some include the tough all-weather cover for added protection against the elements.

### **inigma Stronghold® SS80**

Body width	80mm
