

OLD ENGLISH 555

THE ULTIMATE MARINE PADLOCK

240|YEARS
OF LOCKMAKING EXCELLENCE

OLD ENGLISH 555 THE **ULTIMATE** MARINE PADLOCK Withstands total submersion under water

Squire's NEW Old English 555 padlock takes anti-corrosion, waterproof performance to the highest level. The iconic Squire Old English padlocks were first introduced in 1954 and have long been used in underwater situations.

The original versions were used in Newfoundland to lock lobster pots under the sea - testament to their outstanding anti-rust, anti-corrosion properties. Nearly 70 years later, Squire is proud to launch Old English 555, the first Old English padlock with stainless steel shackle and body.

Central to this lock's incredible performance in wet conditions is its four-level lock mechanism made from brass with electrophoretic nickel coating. These locks have been salt spray tested to 480 hours and meet the highest European corrosion resistance standard (EN 1670 - Grade 5).

Ideal for marine environments, boats, jet skis, beach huts, fishing equipment, marinas, harbour and beach locations.

- Ultra-weather resistant, rustproof stainless steel shackle and body casing
- 4-level lock mechanism and brass levers with electrophoretic nickel coating for outstanding performance in the wettest environments
- Withstands 480 hours of salt spray test
- Keyed alike versions available
- Environment-friendly boxed packaging option available, or original clam packs

Passed 480 hour salt spray test

Old English - Marine Grade
